BiAGUA Supreme 12-Tube Solar Distillation Water Heater

SD-12/2100-8/160

Two water tanks · 2100 mm evacuated tubes · Distilled water + hot water

With its ingenious passive design, BiAGUA brings greater value to everyday sunlight. It uses collected solar heat twice—first to produce distilled water, then to recover condensation heat for domestic water heating—delivering two useful outputs in one efficient system. BiAGUA Supreme SD-12/2100-8/160 has a reference daily output of approximately 8 litres of distilled water and 160 litres of hot water. Actual production varies with sunlight, installation and operating conditions.

Applications

Homes and decentralized solar water supply
