BiAGUA Compact 28-Tube Solar Distillation Water Heater

SD28/1800-14/280

Distilled water + domestic hot water

BiAGUA Compact SD28/1800-14/280 uses solar energy to distill water and recovers condensation heat for domestic water heating. Estimated daily production, scaled proportionally by tube count from other models in the same series: approximately 14 L of distilled water and 280 L of hot water. These are proportional estimates; actual production varies with sunlight, installation and operating conditions.
