BiAGUA Supreme 28-Tube Solar Distillation Water Heater

SD28/2100-18.7/373

Distilled water + domestic hot water

BiAGUA Supreme SD28/2100-18.7/373 uses solar energy to distill water and recovers condensation heat for domestic water heating. Estimated daily production, scaled proportionally by tube count from other models in the same series: approximately 18.7 L of distilled water and 373 L of hot water. These are proportional estimates; actual production varies with sunlight, installation and operating conditions.
