# BiAGUA Supreme 18-Tube Solar Distillation Water Heater

## SD18/2100-12/240

### Distilled water + domestic hot water

BiAGUA Supreme SD18/2100-12/240 uses solar energy to distill water and recovers condensation heat for domestic water heating. Estimated daily production, scaled proportionally by tube count from other models in the same series: approximately 12 L of distilled water and 240 L of hot water. These are proportional estimates; actual production varies with sunlight, installation and operating conditions.
